## **INTRODUCTION**

The Food Security and Agriculture Productivity Project (FSAPP) under the Department of Agriculture in the Ministry of Agriculture and Forests aims to increase agriculture production and reduce poverty through four components. These are: strengthening of farmer and producer groups, enhancing farmer productivity, enhancing access to market and facilitating the three components through project management. The Technical Assistance aspects of FSAPP (TA-FSAPP) is managed by FAO.

One of the key outcomes of this project is the identification of schools as potential markets for agricultural produce of the farmers by supplying diverse and nutritionally dense crops to improve nutrition in the school feeding programmes across the country. Dietary habits are influenced by availability of diverse food products. However, production of variety of commodities by farmers is determined by climatic conditions that are beyond the control of farming communities. Therefore, the technology available must help to produce more diverse range of food commodities; and the local production must match with the nutritional demands of the schools.

To achieve this, the School Agriculture and Nutrition Coordinator under TA-FSAPP, in close coordination with the School Agriculture Program in the Department of Agriculture, initiated the development of cropping calendar, based on the crops produced in a gewog. The main objective of the gewog cropping calendar is to guide and facilitate farmer groups in vegetable production planning and supply of more varieties to the 16 schools identified by the project. The schools also need to plan their meals based on the seasonal availability of vegetables in their respective locality. This convergence of local productions and demands entails a win-win situation, where farmer groups have established markets for their products, and schools have steady supply of fresh local products, improving the nutritional intake of students.

## **CROPPING CALENDAR DEVELOPMENT PROCEDURE**

The cropping calendars were developed, over a period of time, in a series of stages. First, the cropping information was collected from the 24 project gewogs through the focal persons in the three ARDCs, Dzongkhag Agriculture Officers and Gewog Extension Officers. Based on the information collected, draft cropping calendars were developed.

A workshop was conducted for key stakeholders where the draft cropping calendars were discussed and finalized for the 24 project gewogs. The workshop identified important aspects like second cropping season, staggered cropping or possibility of extending harvest period.

## **PICTURES**

All crop pictures used in this cropping calendar are from online sources which allowed for reproduction.

## **ACKNOWLEDGEMENT**

The TA Food Security and Agriculture Productivity Project (TAFSAPP) would like to thank PMU, three ARDCs (Bajo, Samtenling, and Yusipang), five Dzongkhags and the staff of the 24 gewogs for their invaluable inputs to the cropping calendars; their invaluable inputs enriched and helped in the finalization of the gewog-level cropping calendars. TAFSAPP would like to thank other collaborators, including the School Agriculture Program of Department of Agriculture, the School Feeding Program of Ministry of Education, and the World Bank for their timely inputs.
