OBITUARY

A sudden demise of our colleague Mr. Dorji Wangchuk on 14 June 2011 at a young age of 43 in Thimphu has saddened & shocked all of us. The staff members of the Department of Agriculture convey their heartfelt condolences and empathy to the bereaved family on his untimely & sudden demise.

He was always dutiful and committed to his mandates & assignments.

The agriculture statistics publication for 2010 is dedicated to our much-loved friend late Dorji Wangchuk. He will always be remembered for his hard works and initiatives of bringing-up agriculture surveys and agriculture statistics publication as the most popular and referred publication of the Department of Agriculture.

May his soul rests in eternal peace.

DEPARTMENT OF AGRICULTURE
MINISTRY OF AGRICULTURE AND FORESTS
ROYAL GOVERNMENT OF BHUTAN
TRASHICHHODZONG : THIMPHU

FOREWORD

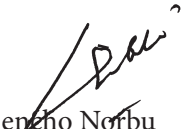

The annual agriculture statistics publication provides information on field crops and horticulture crops, production areas and yields besides status of accessibility, irrigation and other RNR infrastructure that appraises the scope of rural livelihoods improvements at various levels in the country.

Through this publication, the Department of Agriculture look forward to offer a synopsis on the coverage and extension service delivery for agriculture development and provide necessary support in decision making process. The information substance of this publication is also anticipated to facilitate in planning of area specific approach for commodity development with reference to the social and technical potentials.

The conduct of the samples surveys and the data collection method for 2010, and taking into consideration the field situations, time and the samples size under which the field surveys were carried out provide the basis for exactness of the data. In general, the accurateness of data may however vary within the same place at different times and within farmers and the enumerators as well sample size and selection of process.

The Department of Agriculture acknowledges the efforts put in by all concerned, and take this opportunity to express gratitude to all Dasho Dzungdas, National Statistics Bureau, PPD/MoAF and other relevant agencies for their continued support, guidance and appreciation to our DAOs, ADAOs, Gewog Extension staff and the farmers for their contribution in conducting and providing information on time.

I applaud colleagues of the Extension & Information Management of the Department of Agriculture and particularly the late Dorji Wangchuk for his accomplishments and taking lead role on data development, and publication for 2010.

Chencho Norbu
Director

INTRODUCTION

The Agriculture Statistics 2010 in the series of publications by the Department of Agriculture reflects on agriculture information at the Dzongkhags & Gewogs. This annual publication presents comprehensive information on harvested area, production and productivity of all potential crops. The statistics also include information on self sufficiency level, food shortages and coping mechanisms besides relevant administrative data: Farm road, irrigation channels, RNR services centers and farm machineries.

OBJECTIVES

The objectives of the survey are:

- To establish and develop reliable information on crop production and land use for planning and monitoring of agriculture development programmes.
- To generate data required for preparation of plans, programs and to assess the achievements.
- To provide baseline data for monitoring of millennium development goals (MDGs) particularly poverty and food security situations
- To institutionalize information management at the Dzongkhags & Gewogs level.

ORGANIZATION OF THE SURVEY

The survey was focussed on the rural farming households led by the Extension Co-ordination & Information Management program of the Department of Agriculture in conceptualization, questionnaires development and co-ordination of the sample survey. The field level extension personnel have been engaged in the collection of field data by using set of the questionnaires.

SURVEY METHODOLOGY

SAMPLING PROCEDURES & DESIGN, FRAMES & UNITS

The field survey adopted Linear Systematic Sampling to select the rural farming households. It consisted of drawing of sample unit by unit, giving equal probability of selection to every unit in the population at each draw. The households sample was applied to all the Gewogs irrespective of the sizes and economic activities undertaken.

All 205 Gewogs in the country served as the domain for the sample survey. All the Gewogs were included in the sample survey in order to cover different ecological resources endowment, and development stages. A household was taken as the lowest sampling unit and the household lists for each Gewog served as the sample frame from which sample was chosen for interview. The survey adopted Linear Systematic Sampling to select the sample households. The sample was applied depending on the total numbers of rural households in the Gewogs.

To minimise sample errors, the samples were selected jointly with the DAOs and/or the ADAOs by applying random number residing in the village to minimize non sampling error and using updated rural agriculture farming households maintained in the Gewogs. The DAO/ADAO during their regular meeting briefs the sampling procedures to the Gewog extension personnel (as enumerator) and they were then provided with adequate questionnaires, time frame and sample list for identification and interview.

FIELD OPERATIONS

The source of data actually begins from the enumeration; any mistake committed at the enumeration stage shall be a mistake that will have greatest impact on the quality of the final data. Therefore, in order to bring down the field enumeration errors to a minimum, a daylong briefing to Agriculture extension personnel, ADAO & DAO was conducted on the following topics in their respective Dzongkhags to avoid data collection problems and compilation discrepancies.

- Purpose and objective of the annual agriculture surveys
- Structure of the questionnaires and its logic
- Familiarize with the concepts and terms used in the questionnaires
- Questioning clarity & methodology: clear and without changing original meaning
- Approach to be adopted: patience and tolerance with respondents
- Work ethics: perform duties with honesty, diligence and sincerity
- Carry out interview as planned and advised by the supervisors and/or the coordinators
- Submit completed questionnaires to the supervisors for necessary authentication

METHOD OF DATA COLLECTION

The Gewog Extension personnel conducted enumeration by visiting individual households and interviewed by administering a set of structured questionnaires. (Respondents shall be the head of the household or someone in the family who leads on the farming activities of the household). The monitoring was done by either DAO or

the ADAO during the survey and the survey validation was done at the Dzongkhag Agriculture Office after submission by the field personnel. Any inconsistencies of data should be either removed or rechecked during the validation processes.

REFERENCE TIME

The annual agriculture survey 2010 has captured all agricultural areas and productions including harvested areas falling from January 2010 to December 2010. The enumeration period was from October 2010 to December 2010.

DATA PUBLICATION: ENTRY, PROCESSING & ANALYSIS

All ADAOs of 20 Dzongkhags & some selected Gewogs Extension personnel were called to Paro with survey questionnaires for data entry in January 2011.

The data entry was done in CSPro version 4 databases and analyzed and tabulated in SPSS. The analysis and tabulation was done by IMS, DOA in consultation with National Statistics Bureau. All efforts including data scrutiny were conducted to minimize data errors. The incomplete data although entered in database was not analyzed to avoid publication errors.

SURVEY COVERAGE & RESPONSE RATES

The survey covered 36,685 rural farming households (41%) in 20 Dzongkhags and 205 Gewogs based on application of appropriate weights for the missing data despite its insignificant non response rates. The estimated total rural agriculture households at the national level for 2010 are 87,804.

MAJOR CONSTRAINTS IN AGRICULTURE DATA

- One of the major tribulations was that the information provided by the farmers is based on memory as there is no tradition of keeping farm records. Further, some farmers are reluctant to provide correct information particularly on land holdings and cash crop production due to fear of taxation.
- Most farmers use local measurement units that differ from place to place that instead of reporting in Kg and Acre they usually report in langdo, bags, baskets which not only poses difficulties in compilation but also affects the quality of data in terms of area and production.
- To frame the sample list it is necessary to know the number of farming households registered in the Gewogs but this information in some Dzongkhags are difficult to be accessed and/or not updated besides the information sharing is

- not timely.
- Some respondents tend to extrapolate or under report due to lack of knowledge about information and in some cases information provided depends on the mood of the respondents during enumeration.
 - The productivity and area seems declining due to crop damages by wild animals and shortage of farm labor thus the labor wage is expensive to cultivate all lands of the household.
 - The trend of rural to urban migration is increasing which signifies that chunk of land are left fallow in rural areas.

FUTURE COURSE

The agriculture statistics is proposed to be published biannually from 2011 onwards in view of minimal differences of annual data seen in terms of land use pattern and production figures and in light of enormous time and other resources involved during the annual sample surveys. The data collection and annual update of field agriculture information through crop cuts and interviews shall continue to be a part of Dzongkhags & Gewogs regular extension activities. The data on an annual basis shall be proposed to be compiled and recorded by the Gewogs, the Dzongkhags and the RDCs.
